

# Introducing Simplistic Water Level Control

## AquaFill 801

Finally there is an automatic water leveller with a valve that operates just as efficiently under mains or gravity fed tank water.

AquaFill is a convenient automatic water level control for use in swimming pools, spas, water features or ponds.

Preset timed automatic filling options. Choose 5, 10, 15 or 20 minute fill times.

# AquaFill 801

## Applications

To be used for automatically topping up the water level of a specific body of water. Ideal for swimming pools, spas, water features or ponds.

The AquaFill 801 will fill the body of water for a preset period of time and if the pre set water level has not been reached, the unit will automatically recommence filling until the pre set water level is reached.

The AquaFill 801 Water Level Controller can fill from mains water pressure or gravity fed water tank supply.

Time settings for the AquaFill 801 Water Level Controller can be set for 5 minutes, 10 minutes, 15 minutes or 20 minutes.

Should a longer fill time be required, the AquaFill 801 Water Level Controller has the facility to double the fill times.

## Ordering information

A complete system will consist of one AquaFill 801 Water Level Controller and one AquaFill sensor Kit with motorised valve.

AquaFill 801 Water Level Controller	#033-12S
AquaFill Sensor Kit c/w Valve – 3m Cable	#033-131S
AquaFill Sensor Kit c/w Valve – 20m Cable	#033-132S
AquaFill Sensor Kit c/w Valve – 50m Cable	#033-133S

Note. The AquaFill 801 Water Level Controller comes with a 10 amp cord and plug, ready to plug in and switch on.
