

# Introducing Pool & Spa Side Control

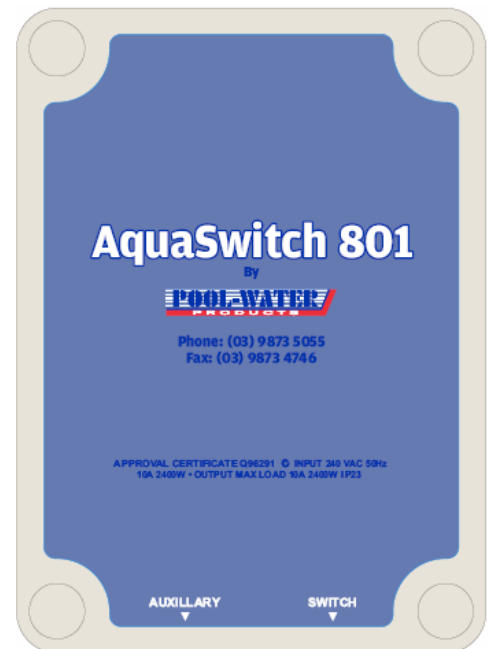

## AquaSwitch 801 Controller

AquaSwitch 801 is a very versatile controller that provides control of boost pumps, air blowers, pool lights, water features and garden lights.

Easy to install, the AquaSwitch 801 is an electrically operated low voltage plug in controller.

Coupled with the Gemini switch, the AquaSwitch 801 allows remote operation of a single item at the touch of a button.

AquaSwitch 801 has time out ability.

*Simplifying Pool Life*

# AquaSwitch 801 Controller

When coupled to a Gemini Switch, AquaSwitch 801 Controller can be used to operate pumps, blowers, lights, or other appliances from convenient locations such as pool or spa coping.

The AquaSwitch 801 Controller can be set up as:

1. Standard – To turn on and off – one two appliance with the touch of the switch.

Or

2. Time-out – To be turned “On” only with the switch, but to turn off automatically after a pre-set period of time. The times may be set individually for each appliance.

Both of the above options use the Gemini Switch. One Gemini can be wired across two AquaSwitch 801 Controllers to remove the necessity for two separate switches on the pool or spa coping.

## Ordering information

A complete system will consist of one AquaSwitch 801 Controller, and one Gemini Switch.

AquaSwitch 801 Controller	# 032-31
---------------------------	----------

The Gemini Switch is a dual *Latching switch* type.
